PROFESSIONAL SUMMARY

Senior Software Engineer and Backend Architect with about 10 years of experience in **.NET / C#**, building mission-critical systems for **banking** (Itaú BBA), **healthcare** (TOTVS), **tax ERP** and **cloud computing** (Skyone).
I am currently the architect and lead developer of **EasySky**, an enterprise cloud infrastructure orchestration platform natively integrated with **Oracle Cloud Infrastructure (OCI)**, powered by a **220+ endpoint** REST API built on Clean Architecture and DDD.
I focus on designing systems teams can maintain and evolve: well-defined architecture, clear API contracts (OpenAPI), security by design (OWASP, NIST) and engineering standards that shorten onboarding and raise delivery quality.

TECHNICAL SKILLS

- **Backend:** .NET / .NET Core, C#, ASP.NET Core Web API, Entity Framework, Node.js, Java, REST APIs, OpenAPI / Swagger
- **Architecture:** Microservices, Clean Architecture, DDD, CQRS, Event-Driven, RabbitMQ, SOLID, Design Patterns, TDD
- **Cloud:** Oracle Cloud Infrastructure (OCI), OCI Cloud, OCI SDK, AWS Lambda, Amazon S3, AWS API Gateway, Serverless, Infrastructure automation
- **Data:** SQL Server, PostgreSQL, MongoDB, Stored Procedures, ETL, GoodData
- **Security:** OAuth2, JWT + Refresh Token, RBAC, OWASP, NIST
- **DevOps, Agile & Frontend:** Docker, Git, CI/CD, Jenkins, SonarQube, Scrum, Angular, TypeScript

PROFESSIONAL EXPERIENCE

Software Engineer · EasySky Architect & Lead Developer Jan 2025 – Present
Skyone · São Paulo, Brazil

Architect and lead developer of EasySky, an enterprise cloud infrastructure orchestration platform. Accountable for architecture decisions, the security model and the engineering team's technical standards.

- Architected the platform with **5-layer Clean Architecture + DDD**, supporting **200+ components** (services, handlers and integrations) with low coupling and continuous evolution.
- Built the **220+ endpoint orchestration REST API in .NET / C#**, natively integrated with **Oracle Cloud Infrastructure (OCI SDK)**, centralizing infrastructure management for enterprise customers.
- Automated **infrastructure provisioning** as code (VMs, networks, volumes and security groups), removing manual steps and operational errors.
- Implemented extensible, **automated Disaster Recovery** using the **Strategy Pattern**, enabling new DR strategies without touching the platform core.
- Designed **fine-grained RBAC** authorization with server-side validation and a **high-performance cache**, enforcing per-resource access control without latency penalties.
- Implemented **JWT + refresh token** authentication in HttpOnly cookies following **OWASP and NIST**, mitigating XSS and session hijacking risks.
- Defined the **architecture guides and development standards** adopted by the whole engineering team, shortening onboarding for new developers.
- Standardized API contracts with advanced **OpenAPI documentation** and custom filters, speeding up integration with the front end and API consumers.

Stack: .NET, C#, OCI SDK, Oracle Cloud (OCI), Clean Architecture, DDD, REST APIs, OpenAPI, RBAC, JWT, OWASP, Strategy Pattern, Disaster Recovery, RabbitMQ, Docker, Git, Scrum

Full Stack Software Engineer Aug 2021 – Jan 2025
Itaú BBA · São Paulo, Brazil

Credit recovery systems: business-critical processes for the bank, with large data volumes and integrations across many areas.

- Built **.NET Core / C# microservices** and enterprise **REST APIs** integrating multiple internal systems across the credit recovery pipeline.
- Implemented **CQRS** with **SQL Server** for writes and **MongoDB** for reads, isolating transactional workloads to scale high-volume queries.
- Built **serverless AWS Lambda** functions integrated with **Amazon S3**, decoupling file processing with pay-per-use cost.
- Contributed to **architecture** decisions and **performance** improvements of the platform in a regulated banking environment.
- Developed **Angular** interfaces for business teams, working end to end (full stack).

Stack: .NET Core, C#, Microservices, CQRS, REST APIs, AWS Lambda, Amazon S3, SQL Server, MongoDB, Angular, TypeScript, Docker, Git, Scrum

Software Developer

Nov 2019 – Aug 2021

TOTVS · São Paulo, Brazil

Systems for health insurance providers, compliant with ANS (Brazilian health regulator) requirements.

- Developed backend features in **.NET Core, Java and AdvPL** using **TDD**, ensuring **ANS** regulatory compliance and reducing regressions in critical modules.
- Modeled data in **SQL Server and PostgreSQL** and built **ETL pipelines** for Big Data with **GoodData**, enabling analytics dashboards for health providers.
- Designed and documented **REST APIs with OpenAPI**, simplifying integrations with partners and legacy systems.
- Built front-end features with **Angular and TypeScript**, delivering functionality end to end.

Stack: .NET Core, C#, Java, AdvPL, SQL Server, PostgreSQL, ETL, GoodData, OpenAPI, TDD, Angular, TypeScript, Git, Scrum

.NET Software Developer

Dec 2016 – Nov 2019

Grupo Módulos · Santo André, Brazil

ERP for small and mid-sized businesses integrated with Brazilian electronic invoicing (NF-e and NFS-e).

- Developed ERP backend modules in **C# / .NET Framework** applying **SOLID and DDD**, keeping tax and accounting routines cohesive and extensible.
- Integrated the ERP with the Brazilian Federal Revenue **SOAP/REST web services** to issue **NF-e and NFS-e** e-invoices, automating customers' tax compliance from within the system.
- Built the data layer with **Entity Framework** and **SQL Server stored procedures**, optimizing the ERP's highest-volume queries.

Stack: C#, .NET Framework, Entity Framework, SQL Server, SOLID, DDD, SOAP, REST, Git, Scrum

EDUCATION

- **Bachelor of Technology in Industrial Mechatronics** — SENAI São Paulo (2011 - 2014)

CERTIFICATIONS

- Oracle Cloud Infrastructure 2024 Certified Foundations Associate — Oracle
- Software Architect Program (Formação Arquiteto de Software)
